

# The KVM for Intranet that extends services and capabilities

## Scenario: School

A school wants to take advantage of the existing fiber network infrastructure. They would like to broadcast announcements and stream videos all over the campus, such as in the activity center, classrooms and hallways. At the same time, they would like to enable faculty members to remotely access their teaching materials while inside the classroom.

## ATEN Solution

### Digital KVM Extender Solution

The CE790 is an IP based KVM Extender that supports high quality digital audio and video streaming from anywhere on the intranet.

## Benefits

- The CE790 lets the school deliver data from one computer to LCD monitors distributed in several parts of the campus.
- The CE790 can be mounted on an LCD rack to save the space.
- A teacher inside a classroom can access and update his/her computer that is located in the faculty room.

## Setup
