

KVM setup via Intranet for easy file access anywhere!

Scenario: Health Facility

A doctor regularly visits and checks on his patients who are confined in separate hospital rooms. He stores patient records on a computer located in his office. He wants to be able to access and update the data while doing his rounds, so he can help him keep track of each patient's health and status in real-time.

↙ **ATEN Solution**

Digital KVM Extender Solution

The CE790 is an IP based KVM Extender that supports high quality digital audio and video streaming from anywhere on the intranet.

↙ **Benefits**

- With the CE790, the doctor has no trouble accessing the record of each patient and updating them on each visit.
- Compared to other methods, such as VNC, the CE790 has better video quality so that images are delivered clearly.
- Another advantage of the CE790 is that you can add additional consoles and users, as required.
