

PE8216

20A/16A 16-Outlet Outlet-Metered & Switched eco PDU

PE8216B

ATEN's NRGence line-up is a new generation of green energy power distribution units (eco [PDU](#)s) that optimize the efficiency of [data center](#) power usage. The PE8216 eco [PDU](#)s are intelligent [PDU](#)s that contain 16 AC outlets and are available in various IEC / NEMA socket configurations. These models feature proactive overload protection to automatically power off the last outlet that causes the current overload while allowing users to set shutdown priority.

The eco [PDU](#)s provide secure, centralized and intelligent power management (power on, off, and cycle) of [data center](#) IT equipment (servers, storage systems, KVM switches, network devices, serial data devices, and more), as well as the ability to monitor the center's health environment via sensors.*These [PDU](#)s offer remote power control combined with real-time power measurement, allowing users to control and monitor the power status of devices attached to the [PDU](#)s, either at the [PDU](#) device, bank, or outlet level, depending on the model, from practically any location via a TCP / IP connection.

The power status of each outlet can be set individually, allowing users to switch each device on / off. The eco [PDU](#) also offers comprehensive power analysis reports which can separate departments and locations, providing precise measurements of current, voltage, power and watt-hour in a real-time display. Installation and operation are made fast and easy by simply plugging cables into their appropriate ports, and users get to enjoy the intuitive browser-based configuration and management. The eco [PDU](#) firmware is upgradeable over the Net, meaning users can download updates from ATEN's website to ensure that their eco [PDU](#) is equipped with the latest functionalities and improvements.

The series also supports the 3rd party V3 SNMP manager software and NRGence [eco DC](#) (Energy & DCIM Management Web GUI). The [eco DC](#) makes it easy when it comes to the management for multiple devices by allowing users to configure eco [PDU](#) setting and monitor the power status of the equipment connected to the [PDU](#) through a user friendly interface. Along with its set of features, the PE8216 series has become a convenient, reliable and cost-effective solution to help remotely manage power access for multiple computer installations and allocate power resources with efficiency.

* Note:

1. Sensors are optional accessories. A sensor-enabled installation is required to generate more complete energy-efficient data and charts. The higher the sensor installation density is, the more accurate the data generated will be.
2. eco [PDU](#)s are primarily designed for access via Intranet; extra network security protection is suggested for Internet access usage.

Features

- **Connections**
 - Supports 10 / 100M bit Ethernet interface
 - Supports TCP / IP, UDP, HTTP, HTTPS, SSL, DHCP, ARP, NTP, DNS, Telnet, Auto Sense, Ping, SNMP V1,V2 and V3
 - Supports three-level account / password security, IP / MAC filter, 128 bit SSL, and RADIUS
 - Supports [CC2000](#), [eco DC](#), multiple browsers (IE, Firefox, Chrome, and Safari)
- **Metering**
 - PDU and outlet level power metering and monitoring
 - Environment monitoring – supports external temperature / temperature and humidity sensors for rack temperature and humidity monitoring
 - Current, voltage, power, power dissipation, temperature, and humidity metering and threshold level setting
- Supports door sensor
- **Outlet Switch Control**
 - Remote power outlet control (On/Off, Power Cycle) by individual outlets and outlet groups
 - Outlet group support at the [PDU](#) level
 - On / Off scheduling for individual outlet and outlet groups. Power management tasks can be scheduled on a daily, weekly, or user-specified time basis
 - Supports multiple power control methods – Wake on LAN, System After AC Back, Kill the Power
 - Power-On sequencing – users can set the power-on sequence and delay time for each outlet to allow equipment to be powered on in the correct order
 - Proactive overload protection (POP) – automatically powers off the last outlet that causes the current overload while allowing users to set shutdown priority
