

CS1922

2-Port USB 3.0 4K DisplayPort KVMP™ Switch (Cables included)

The ATEN CS1922 2-Port USB 3.0 4K DisplayPort KVMP™ Switch provides the latest innovations in desktop KVM switching technology for the increasing demand of higher video quality and transfer speeds on modern computers. The ATEN CS1922 offers an unprecedented performance of delivering 4K resolution, the next generation USB 3.1 Gen 1 hub with SuperSpeed 5 Gbps data transfer rates and enhanced user-friendly operations.

As a KVM switch, the CS1922 allows users to access two DisplayPort computers from a single USB keyboard, USB mouse and monitor console. Doing so with ease, the CS1922 provides three convenient switching methods – using front panel pushbuttons, mouse, or hotkeys for flexible access to any computer connected to the installation.

The unique independent switching feature allows the KVM control to focus on one computer while the USB peripheral focus is on another computer. This eliminates the need to purchase a separate USB hub or stand-alone peripheral sharer – such as a print server, modem splitter, etc.

With its rich feature set, the CS1922 is designed to surpass all requirements in graphic design, animation, and video-editing applications. Such as CAD/CAM (computer aided design/manufacturing). The CS1922 allows you to share the audio from each of the connected computers. HD audio transmitted by DisplayPort would offer you a different experience.

Note:

1. Mouse port switching is only supported under mouse emulation mode with a USB 3-button mouse wheel.

2. For DisplayPort 1.4 compliant display device, make sure to configure the device setting to be compatible with [DisplayPort 1.2](#) to avoid compatibility issue.

3. HD audio through DisplayPort cannot be switched independently.

4. [MST \(Multi-Stream Transport\)](#) requires either monitors that are capable of [DisplayPort 1.2](#) daisy-chaining, or use of a powered DisplayPort [MST](#) Hub. A DisplayPort v1.1a display can be the last display in a DisplayPort v1.2 chain. The PC source must be [DisplayPort 1.2](#) compliant.

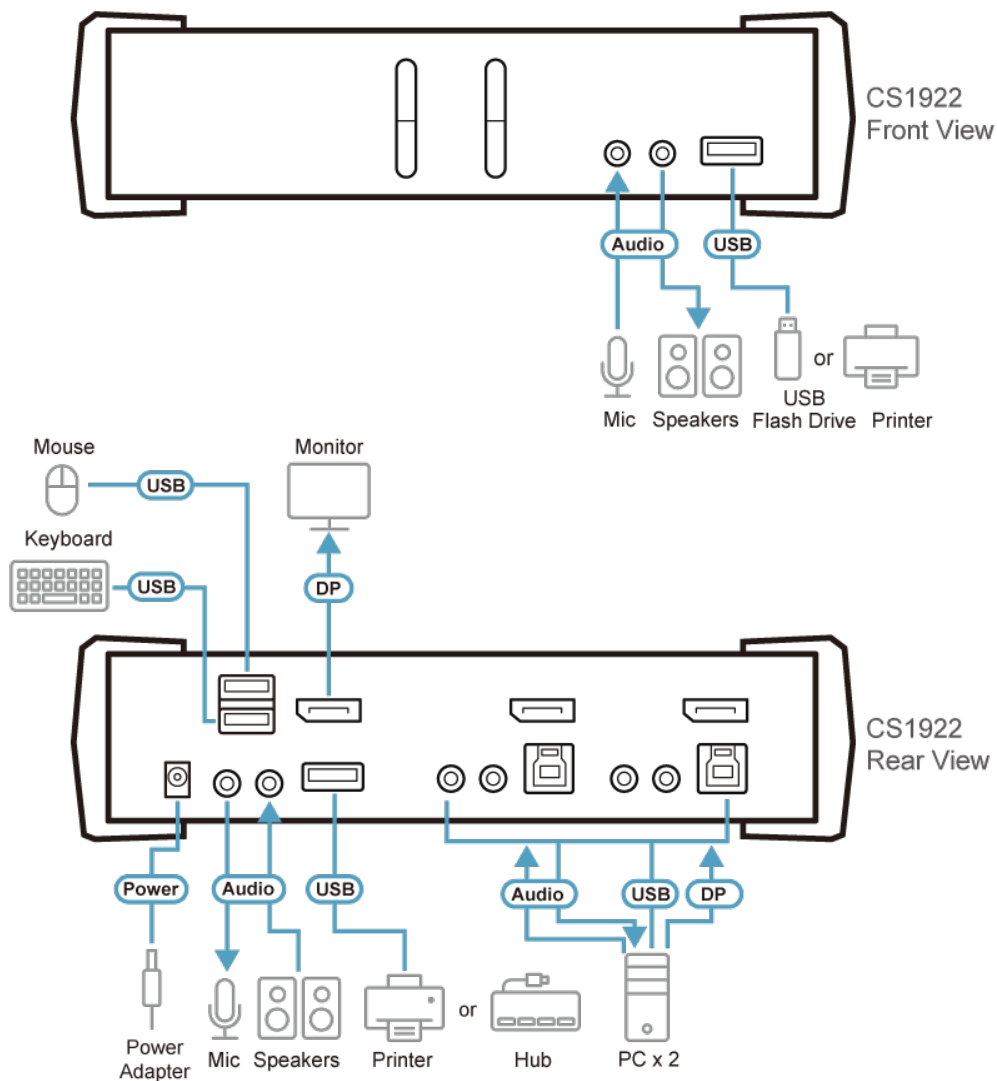

5. DisplayPort Dual – Mode technology (DP++) does not require an active adapter for most single display setups. Active DisplayPort adapters are recommended if you are unsure of the video source's DP++ compatibility.

6. PC keyboard combinations emulate Mac keyboards. Mac keyboards only work with their own operating system.
