
KW1000

KVM over Wireless

The Altusen KW1000 is a KVM switch that uses the TCP/IP and IEEE 802.11b protocols to allow administrators to remotely monitor and access their computer/server installations wirelessly. Wireless connectivity eliminates the infrastructure expense and inconvenience of wired networks, and provides the administrator with the freedom of a mobile solution.

Egenskaper

- Wireless remote access of KVM switches or servers (WLAN IEEE 802.11b)
- Advanced security features: password protection; advanced encryption technologies
- High video resolution: up to 1600 x 1200; DDC2B
- Windows GUI and Java based Client software; Java client works with all operating systems
- Firmware upgradeable via WLAN Ethernet connection
- Multiple user accounts

Advantages of KVM over Wireless

- **Complete Mobility:**
Roam using a WLAN 802.11b while accessing your KVM Switch or a computer
 - **Complete Wireless Management:**
Control hundreds of computers via a KVM switch
 - **Convenient and User Friendly:**
Browser based GUI or Windows AP for ease of use
 - **Distance Transmission:**
Up to 300 feet of wireless roaming
 - **Advanced Security:**
RSA 1024 bit encryption for safe and secure data transfer
-
